

用于获取hibernate Session的工具

```
1 public class HibernateUtils {
2     //创建sessionfactory
3     private static SessionFactory sessionFactory;
4     static {
5         try {
6             Configuration configuration = new Configuration().configure();
7             ServiceRegistry serviceRegistry = new StandardServiceRegistryBuilder()
8                 .applySettings(configuration.getProperties()).build();
9             sessionFactory = configuration.buildSessionFactory(serviceRegistry);
10        } catch (Exception e) {
11            // TODO: handle exception
12        }
13    }
14
15    public static Session getCurrentSession() {
16        return sessionFactory.getCurrentSession();
17    }
18
19 }
```
