多维数组:

把数组当成元素放到另外一个数组中

二位数组:

```
静态初始化:
        int[][] c1 = {a1, b1};
        int[][] c2={\{1, 2, 3\}, \{4, 5, 6\}\}};
    动态初始化:
        int[][] c3 = new int[2][3];
遍历数组:
      控制行
               for (int i = 0; i < c2. length; i++) {
          控制列
            for (int j = 0; j < c2[i].length; j++) {
           System.out.printf("%d\t",c[i][j])
         }
        System. out. println();
```
